

Moving Forward

- Identify projects or pilot schemes
- Ensure adequate availability of water and biomass
- Identify suitable feedstock to produce ethanol economically
- Identify investment opportunities
- Undertake a feasibility study

Let's work together

Key Issues

- The needs of the people?
- Current cost of fuel and electricity?
- Cost effectiveness
- Government support in initial stages
- Private sector initiative

A platform for joint ventures

What will MPCEE do?

- Consult with you to discuss and identify your needs
- Show how simple it is to stimulate your economy, increase employment and create new industry
- Assist in the identification of affordable pilot scheme(s) or major projects
- Assist in sourcing development funding
- Arrange the opportunity to see how all of this works
- It is neither necessary nor desirable to convert an entire country to alternative or renewable energy overnight

MPCEE will support your efforts

More Solutions ...

- Potable water from all sources (static & mobile units)
- Drum washing & crushing
- Cryogenics for disposal/recycling of plastic containers
- Organic waste to energy
- Alternative & renewable energy
- Efficient energy solutions

MPCEE can make it happen!

MPCEE

- Provides consultancy and training
- Sources technology and solutions
- Catalyst for creation and facilitation of projects
- Global partners, technology associates & contacts

Encouraging and assisting all types of businesses, large and small, to appreciate and understand their responsibilities to environmental protection and pollution control

- Renewable Energy
- Sustainable Development
- Carbon Free Society
- Environmentally Sound Technologies

MPCEE is able to offer advice and a complete package of products, services and funding to suit all business types and industry sectors.

Martin Parr

- 35 years in proactive environmental management
- Champion of environmental protection
- Positive and lateral thinker
- Entrepreneur
- Communicator at all levels
- A 'Make it Happen' man

Protecting the environment together

**Tackling
Climate Change
with
ECO-ENERGY**

Protect the environment; give your children's children the right to a pollution free planet!©

New Energy Economy

From a **hydrocarbon economy**

→ to **the new economy** relying on

sustainable renewable energy resources

- Solar, Wind, Wave, Geothermal, Water, Tidal, etc
- Biomass → liquid or gas → electricity, heat, fuels
- Biofuels (ethanol, biodiesel, flexfuel)
- Biogas
- Hydrogen fuel cell

It's time for an oil change

Eco-Energy

Transform your agricultural and energy industries for the benefit of your people, your country and our planet.

- Stimulate the economy
- Increase employment
- Create new industries
- Reduce waste

Decision time

Leading the field

New groundbreaking technology can revolutionise outdated production methods for carbon free fuel and energy.

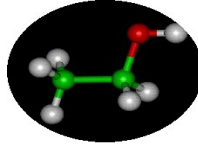

We can clean up countries and produce the most economical energy and fuel

One Location, One Technology

We can now convert all plant life and non-volatile waste, including:

- All plant life
- Non-volatile solid waste
- Carbon dioxide
- All plastics
- Residue from traditional biofuel/diesel production
- Waste water with high phosphorous concentrations
- Contaminated land

to ***direct liquid and gaseous energy***

Biomass to Ethanol

New feedstocks, improved energy crops, integrated biorefineries

- Cheaper fuel for consumers
- More energy security & diversified sources
- Higher farm incomes & rural employment
- Significant carbon emission reduction
- Healthier local economies
- Reduced energy prices

Biomass supply can be accomplished with relatively modest changes in land use and agricultural and forestry practices

A Real Carbon Free Society

- Ethanol to energy
- Hydrogen gas in commercial quantities
- High capacity fuel cells to produce power
- Sustainable and pollution free energy
- A new fuel source for vehicles, heating and electricity
- Creation and enhancement of local economies

Power to the people who need it

Eco Energy

Now the ultimate solution

- Simple
- Flexible
- Scalable
- Affordable
- Accessible to all
- Based on natural phenomena
- Using existing natural & man made material

Available NOW and for commercial quantities

Economical Power Source

Our fuel cell development is scalable to any power requirement:

- Individual
- Building
- Community
- Village
- Town
- Country

Now the most economical power source available

Benefits & Opportunities

- Reduce dependency on imported electricity
- Provide cheap power to remote areas
- Reduce your waste and pollution problems
- Reduce carbon dioxide emissions
- Stimulate national and local economies
- Improve the standard of living
- Fulfil the world's demand for a sustainable environment and carbon free energy

Power to the People

- A product that is both needed & affordable
- A package for all your power requirements
- Power in the remotest regions
- A power source designed to be scalable for any power output requirement
- Electricity supply for individual appliances... to whole towns
- Ability to reduce demand on an electricity supply grid
- Potential to provide surplus power to an electricity supply grid
- Ability to harness natural heat for hot water, at no extra cost

Protect the environment; give your children's children the right to a pollution free planet!®
